Hi Chris,

Can I ask you for one more bore hole?

We have been asked to turn the lane into a continuous lane so I need to know what the structure is in the shoulder. Please let me know if there are any additional costs associated with the one BH.

Let me know your thoughts.

TTYL

Mike

Mike,

I'm thinking a core 1.5m from the edge of pavement at the location shown in the attached picture would help in determining the existing pavement structure. If you agree, could you please ask AME to complete the core as they are doing cores on the Linc. currently anyway.

Please let me know if you need anything else.

Thanks,
